## Description

Total organic carbon (TOC) analyzers are devices used to analyze the organic carbon content in these water or liquid solutions. They provide highly sensitive, non-specific readouts of all TOC through two-stage processes involving oxidation and detection. These devices are necessary to account for chemical solvents and bacteria that contaminate water solutions. This is important because of the harmful effects that TOCs may have on health and the environment.

Global Total Organic Carbon (TOC) Analyzer key players include Shimadzu, GE Analytical Instruments, Hach (BioTector Analytical), Mettler Toledo, Analytik Jena, etc. Global top five manufacturers hold a share about 80%. Japan is the largest market, with a share over 30%, followed by North America, which also have a share about 30 percent. In terms of product, Laboratory/Benchtop is the largest segment, with a share over 70%. And in terms of application, the largest application is Environmental Analysis Industry, followed by Pharmaceutical Industry, Chemical Industry.
