Description

Ultraviolet curing (commonly known as UV curing) is a photochemical process in which high-intensity ultraviolet light is used to instantly cure or “dry” inks, coatings or adhesives. Offering many advantages over traditional drying methods, UV curing has been shown to increase production speed, reduce reject rates, improve scratch and solvent resistance, and facilitate superior bonding.

In Europe, Ultraviolet Curing Systems key players include IST Metz GmbH, Höhle group, Excelitas, Heraeus, GEW, etc. Global top five manufacturers hold a share nearly 50%.

Germany is the largest market, with a share about 35%, followed by UK, and France, both have a share about 35 percent.

In terms of product, Mercury UV Lamps is the largest segment, with a share over 40%. And in terms of application, the largest application is Electronic Industrial, followed by Printing Industrial, Building Materials Industrial, Manufacturing Industrial, etc.
