Description

V-belt is a belt of V-shaped cross section engaging a V-shaped groove in a pulley for wedging and better traction.

V-Belts are friction based power or torque transmitters. The power is transmitted from one pulley to the other by means of the friction between the belt and pulley. The rubber used as the base material plays a very vital role in this. This is quite similar to the friction between the Tyre and road in the automobiles that enables the automobiles to move on the road.

The V-Belt is called so because of its cross section. The cross section of a V-Belt is similar to that of the letter 'V'.

The major players in India V-belts market include Continental Corporation, Sanlux, Mitsuboshi, Navyug (India), etc. The top 4 players occupy about 30% shares of the whole market. D Type and E Type are two main types, with a share about 50%. Industrial and Agricultural are the key applications, which holds a share about 60%.

Report Scope

This report quantifies the global V-belts market in revenue (US\$ million) and, where applicable, sales volume (M Am), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.

It standardizes definitions of types and applications, harmonizes vendor attribution, and presents comparable time series by company, type, application, and region/country, including indicative price bands (US\$/M Am) and concentration ratios (CR5/CR10).

The outputs are intended to support strategy development, budgeting, and performance benchmarking for manufacturers, new entrants, channel partners, and investors; the report also reviews technology shifts and notable product introductions relevant to V-belts.

Key Companies & Market Share Insights

This section profiles leading manufacturers, combining 2021–2025 results with a 2026–2032 outlook. It reports revenue, market share, price bands, product and application mix, regional and channel mix, and key developments (M&A, capacity additions, certifications). It also provides global revenue, average price, and—where applicable—sales volume by manufacturer, and calculates CR5/CR10 and rank changes to support comparative benchmarking.
