Description

X-rays are a form of electromagnetic radiation, which have higher energy and can pass through most objects. X-ray machine is a kind of device for generating X-rays. An X-ray machine is composed of a control console which enables the X-Ray technician to select various X-Ray techniques suitable for that specific exam, an X-ray generator that creates and produces the desired KV (kilovoltage), MA (milliamperage sometimes referred to as MAS which is actually MA multiplied by the desired exposure length) and X-ray tube. The heart of an X-ray machine is an electrode pair -- a cathode and an anode -- that sits inside a glass vacuum tube. X-ray machine is widely used in medical and industrial fields.

In US, X Ray Machine key players include Siemens Healthcare, GE Healthcare, Philips Healthcare, Carestream, Agfa Healthcare, etc. The top five manufacturers hold a share over 50%.

Great Lakes Region is the largest market, with a share over 25%, followed by Southeast Region and Northeast Region, both have a share over 40%.

In terms of product, Analog Radiography is the largest segment, with a share over 65%. And in terms of application, the largest application is Medical Institution, followed by Industrial Organization, etc.

Report Scope

This report quantifies the global X Ray Machine market in revenue (US\$ million) and, where applicable, sales volume (K Units), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.
