Description

An inferior vena cava filter (IVC filter) is a type of vascular filter, a medical device that is implanted by interventional radiologists or vascular surgeons into the inferior vena cava to presumably prevent life-threatening pulmonary emboli (PEs). Nearly all patients with deep venous thrombosis or pulmonary embolism who are unable to undergo anticoagulation receive an inferior vena cava filter. Retrievable IVC Filters are also placed in high-risk patients prior to elective surgery.

Global Inferior Vena Cava (IVC) Filters key players include Bard, Cordis, Cook Medical, etc. Global top three manufacturers hold a share over 60%.

North America is the largest market, with a share over 75%, followed by China, and Europe, both have a share about 20 percent.

In terms of product, Retrievable IVC Filters is the largest segment, with a share over 70%. And in terms of application, the largest application is Treatment VTE, followed by Prevent PE, etc.
