Description

PET scanner is a type of nuclear medicine imaging. The scan uses a special dye that has radioactive tracers. Positron-emission tomography (PET) is a nuclear medicine functional imaging technique that is used to observe metabolic processes in the body. The system detects pairs of gamma rays emitted indirectly by a positron-emitting radionuclide (tracer), which is introduced into the body on a biologically active molecule. Three-dimensional images of tracer concentration within the body are then constructed by computer analysis. In modern PET-CT scanners, three-dimensional imaging is often accomplished with the aid of a CT X-ray scan performed on the patient during the same session, in the same machine.

Market competition is intense. GE, Siemens Healthcare, Philips Healthcare are the leaders of the industry. The clear market leader is GE, which holds a 37% market share. In second place is Siemens Healthcare with a 31% market share, while Philips Healthcare has a strong presence in the market.

North America is the largest sales place, with a sales market share nearly 50%. Following USA, Europe is the second largest sales place with the sales market share of 23%.

Report Scope

This report quantifies the global Positron Emission Tomography (PET) market in terms of revenue (US\$ million) and, where applicable, sales volume (Units), using 2025 as the base year and providing annual historical and forecast data for 2021–2032.

It standardizes definitions of Types and Applications, harmonizes vendor attribution, and presents comparable time series by company, Type, Application, and region/country, including indicative price bands (US\$/Units) and concentration ratios (CR5/CR10).

The outputs are intended to support strategy development, budgeting, and performance benchmarking for brand owners, manufacturers, retailers, channel partners, and investors; data are structured with consistent units and fields to facilitate integration into internal FP&A and BI systems.

Key Companies & Market Share Insights
