### Description

Surgical Scalpel is a small and extremely sharp bladed instrument used for surgery, anatomical dissection, and various arts and crafts (called a hobby knife). Scalpels may be single-use disposable or re-usable. Re-usable scalpels can have permanently attached blades that can be sharpened or, more commonly, removable single-use blades. Disposable scalpels usually have a plastic handle with an extensible blade (like a utility knife) and are used once, then the entire instrument is discarded. Scalpel blades are usually individually packed in sterile pouches but are also offered non-sterile.

Surgical scalpels consist of two parts, a blade and a handle. The handles are often reusable, with the blades being replaceable. In medical applications, each blade is only used once (even if just for a single, small cut). Market competition is not intense. Hill-Rom, Swann-Morton, KAI Group and Feather etc. are the leaders of the industry, with about 61% market shares.

Europe is the largest supplier of Surgical Scalpel, with a production market share nearly 32%. North America is the second largest supplier of Surgical Scalpel, enjoying production market share nearly 29%. Europe is the largest consumption place, with a consumption market share nearly 29%. Following Europe, North America is the second largest consumption place with the consumption market share of 26%.

The classification of Surgical Scalpel includes blade and handle, and the proportion of blade is about 85%. Surgical Scalpel is widely used in hospital, clinic and others. The most proportion of Surgical Scalpel is in hospital, and the proportion of Surgical Scalpel used in hospital is about is 83%.
