Description

Thromboelastography (TEG) is a method of testing the efficiency of blood coagulation. It is a test mainly used in surgery and anesthesiology, although increasingly used in resuscitations in Emergency Departments, intensive care units, and labor and delivery suites. More common tests of blood coagulation include prothrombin time (PT) and partial thromboplastin time (aPTT) which measure coagulation factor function, but TEG also can assess platelet function, clot strength, and fibrinolysis which these other tests cannot. Thromboelastography Analyzer provides rapid, comprehensive and accurate identification of an individual's hemostasis condition in a laboratory or point-of-care setting.

The key players of Thromboelastography Analyzer include Haemonetics, WerfenLife, Framar Hemologix srl, Sienco, etc. The top two players of Thromboelastography Analyzer account for approximately 72% of the total market. North America is the largest market of Thromboelastography Analyzer accounting for about 33%, followed by Europe and Asia Pacific. In terms of Type, Conduit Techniques is the largest segment, with a share about 62%. In terms of Application, the largest segment is Hospital, followed by Maternal and Child Health Service.
