Description

This report studies the Tongue Depressors market. A tongue depressor is a tool used in medical practice to depress the tongue to allow for examination of the mouth and throat. The most common modern tongue depressors are flat, thin, wooden blades, smoothed and rounded at both ends, but, historically, tongue depressors have been made of a variety of materials. Since they are inexpensive and difficult to clean, wooden tongue depressors are labeled for disposal after a single use.

Global Tongue Depressors key players include Puritan Medical Products, Agaplastic, DTR Medical, Fazzini, F.L. Medical, etc. China is the largest market, with a share about 20%, followed by USA, with a share about 10 percent. In terms of application, the largest application is Clinics, followed by Hospitals, Academic & Research Institutes, etc.
