Description

Plasminogen, the proenzyme of the fibrinolytically active enzyme plasmin, is a single chain glycoprotein with a molecular weight of about 90,000-94,000 Da (2). Various isoelectric forms exist and can be separated by means of isoelectric focusing (IEF). The complete amino acid sequence contains 790 amino acids. Native plasminogen (glu-plasminogen) has a N-terminal glutamic acid group. Partial plasma proteolysis gives rise to a molecule with N-terminal lysine (lysplasminogen). Currently, the product has obtained the designation of orphan drug by the US Food and Drug Administration (FDA) and by the European Medicines Agency (EMA). Clinical trials are still underway to obtain Marketing Authorization in the United States and in Europe (EU). The report mainly targeting the research status, predicted competitive landscape, market potential and future trends of plasminogen market.

Global Plasminogen key players include Kedrion, Prometic, Genentech (Roche), Boehringer Ingelheim, Kyowa Hakko Kirin, etc. North America is the largest market, with a share about 45%, followed by Europe, with a share about 20 percent. In terms of product, Eye Drops is the largest segment, with a share about 88%.
