### Description

The prosthetic liner acts as a sort of "second skin" between the movable soft tissue of the residual limb (muscles, tissue, skin) and the hard shell of the socket. This reduces movement and friction between the skin and prosthetic socket and therefore reduces the forces in the socket described earlier. The prosthetic liner connects your residual limb to the prosthetic, cushioning the sensitive skin on the residual limb and thereby alleviating problems such as pressure points.

The major players in global Prosthetic Liners market include Ottobock, Ossur, etc. The top 2 players occupy about 60% shares of the global market. North America and Europe are main markets, they occupy about 90% of the global market. Silicone Liner is the main type, with a share about 60%. Leg Disabled People is the main application, which holds a share about 80%.
