Description

Viscosupplementation is a medical procedure during which lubricating fluid is injected into a joint. Also called hyaluronic acid injections or hyaluronan injections, viscosupplementation is most commonly used to treat symptoms of symptoms of knee osteoarthritis.

Viscosupplementation can significantly reduce pain while improving the mobility and function of the joint to make activities of daily living and even athletic or strenuous exercise less painful.

Viscosupplementation is a procedure that involves injecting hyaluronic acid, a gel-like fluid, directly into the joint. Hyaluronic acid is found naturally in the synovial fluid surrounding the joints to reduce friction during movement. The injection goes into effect by lubricating the joint and assisting the synovial fluid to create more cushion. This works to reduce pain and improve the range of motion or the mobility of the joint.

The classification of Viscosupplementation Injection includes Single Injection, Three Injection, Five Injection, and the sales share of Single Injection take about 40%.

Viscosupplementation Injection is widely used in hospitals, clinics and other place. The most proportion of Viscosupplementation Injection used in Hospitals, and the proportion is 55%.

North America is the largest consumption place, with a consumption market share nearly 52%. Following North America, Asia-Pacific is the second largest consumption place with the consumption market share of 28%.

Sanofi, Bioventus, Seikagaku, Anika Therapeutics, LG Chem, Ferring, etc. are the leaders of the industry. Top six company with about 63% market share.
