Description

In simplest terms, iPaaS is a platform for building and deploying integrations within the cloud based and on premises software. With iPaaS, users can develop integration flows that connect applications residing in the cloud or on-premises and then deploy them without installing or managing any hardware or middleware. Here is the characteristic of iPaaS product:

1. Is designed to support enterprise-class integration initiatives — that is, initiatives that require high availability, disaster recovery, security, SLAs and technical support from the provider.
2. Provides user experiences that enable end users to develop and manage integrations independent of the iPaaS provider’s professional services. These experiences must support multiple integration personas, particularly integration specialists and ad hoc integrators.
3. Offers capabilities for executing multiple integration scenarios, including real-time application integration, batch data integration and B2B integration.
4. Provides API management capabilities to support integration.
5. Is fully managed by the vendor for patching and upgrades.
